DISCUSSING THE STATE OF PLAY

At the Dialogues, we heard preliminary findings from the State of Play report. The report, for which research is underway, aims to establish a comprehensive baseline and assess the current landscape of the SAPA sector in India.

The ensuing discussions were a collaborative dialogue around the current findings, as well as how the insights from the participants can be leveraged to enhance the report and position SAPA as a driver of socio-economic impact in India.

The quality of ability is key to achieving the results

Play

- Play is a state of mind
- Play is a state of being
- Play is a state of action
- Play is a state of emotion
- Play is a state of thought
- Play is a state of feeling
- Play is a state of doing
- Play is a state of having
- Play is a state of being
- Play is a state of action
- Play is a state of emotion
- Play is a state of thought
- Play is a state of feeling
- Play is a state of doing
- Play is a state of having

THE CHALLENGES AND THE ROAD AHEAD

The Dialogues were also the platform for multi-faceted discussions around the challenges and the road ahead for the SAPA ecosystem in India. The discussions identified key areas of interest for the sector.

There was promising agreement on the need to have more such conversations, and how the present group can take the form of a coalition working together with policymakers, philanthropists, and the private sector to form a thriving ecosystem.

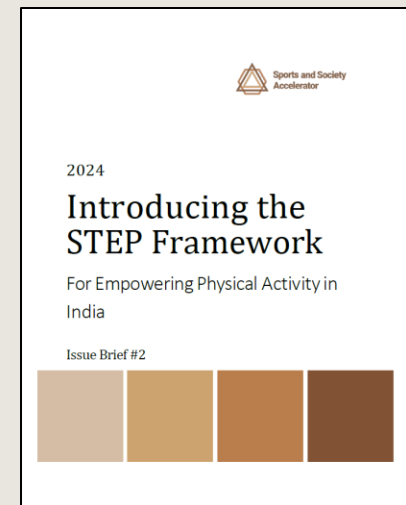

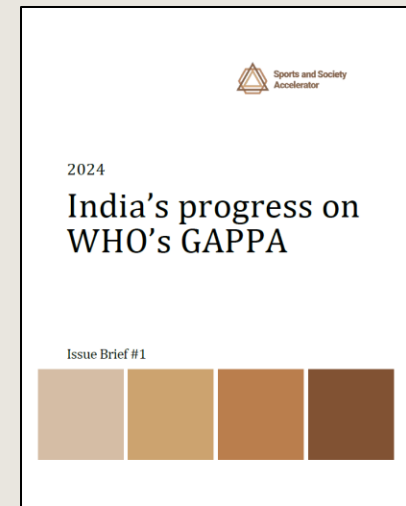

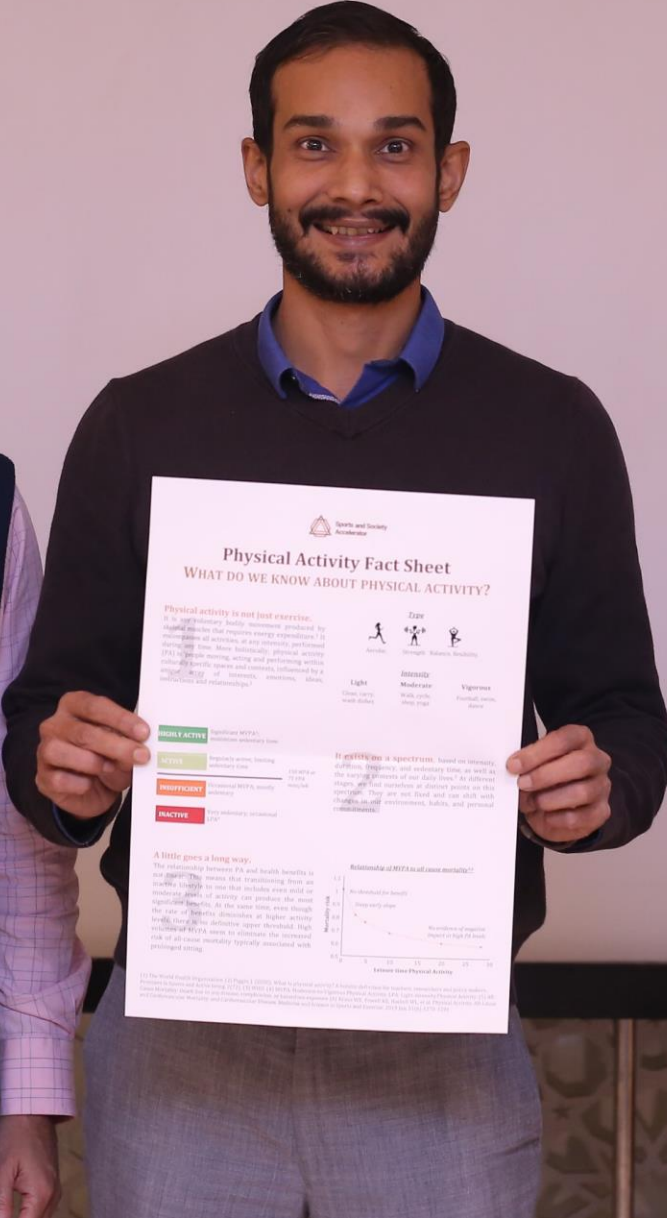

LAUNCHING OUR RESEARCH BRIEF SERIES

We also launched the first of our series of issue briefs and an infographic outlining helpful physical activity guidelines.

The briefs discuss India's policies related to physical activity and present a way forward.

With these briefs, we aim to shed light on the foundational issues and questions on the current state of SAPA, highlight the immense potential of SAPA for development, and spark conversations on the challenges and ways forward for SAPA in India.
